

PSi | PRECISION STAMPINGS, INC.

Specializing in micro-miniature, miniature, and medium sized metal stamped parts for over 50 years!

STAMPING

PLATING

TOOLING

IN THIS ISSUE

Already February!

Time flies doesn't it? At Precision Stampings, Inc. we have been going non-stop since the New Year; and we have you to thank!

We have experienced an increase in orders, quoting activity, and overall interest. To meet this increase in demand and better serve our customers we have increased our hours of operation and are expanding by adding a new bay to house more presses and equipment.

It sure feels like manufacturing is on an upswing once more here in the US. That's good for all of us; especially as we strive to stimulate local and regional economies.

PSi is actively looking for apprentice tool and die makers. Other exciting employment opportunities throughout the plant are also available.

We trust you're feeling some of the same success in 2018 and want to thank you again for the opportunity to serve you!

Looking ahead to the future!

LOOKING AHEAD

PSi is looking ahead to the future...

Two ways PSi is investing in the future is with the use of smart scopes (above) and vision systems (below) for overall better quality systems.

Precision Stampings, Inc. has been investing in the future since its inception!

PSi is continually looking ahead when it comes to automation; especially in quality control.

By continually investing in smart scopes and advanced vision systems among other cutting-edge support equipment, PSi continues to demonstrate our total commitment to quality.

PSi firmly believes that with our unparalleled customer service and quality we will continue to be the supplier of choice for micro miniature, miniature, and medium sized metal stampings.

PSi is committed to the environment and the community that surrounds us. This core philosophy is demonstrated in our state-of-the-art closed-loop plating facility. Our “no-discharge” facility allows for both environmentally friendly operation and reduced cost.

Precision Stampings, Inc. is aggressively seeking to grow its business and believes that our total commitment to quality, customer service, eco-friendly manufacturing and cutting-edge technology will ensure we continue to be your “go to” stamping and plating facility!

- **ISO 9001:2015 Implementation and IATF 16949 Transition:**

Precision Stampings' Management Team is excited to announce that we will soon be implementing the ISO 9001:2015 Quality Standard. Our current ISO TS16949:2008 certification will also be transitioned to the IATF (International Automotive Task Force) 16949 later this year. We believe these updates will further help to ensure that we get your parts right Every. Single. Time.

- **Community outreach:**

PSi is working with local high schools and colleges to actively recruit young talent for its Tool and Die Apprenticeship Program!

PSi Sales Manager, Jonathon R. Mills, was recently asked to be a speaker as an industry leader at the *Inland Empire/Desert Regional Advisory Community for Advanced Manufacturing* conference between manufacturers, college instructors/teachers, and county/state representatives. The conference was organized in an effort to raise awareness of the importance of apprenticeship programs and how all these groups could collectively work together in the future.
