Optimism, Optimization, Opportunity

PSi believes in optimism, optimization and opportunity! Our positive view of the future is part of what drives us to continually improve our systems. This in turn ensures a mutually-beneficial relationship that keeps our clients coming back year after year.

Our high-volume manufacturing facility demonstrates our laser focus on these principles in that we are constantly investing in the future while optimizing the present so that we will be uniquely ready for the Next Big Thing!

We believe that from optimism grows a positive energy that manifests in the ability to dream up those even more effective ways to get things done on your behalf. These may be ways that our competitors may not have considered. And from this superior customer service comes the opportunity to grow our business relationships.

Ultimately, it all boils down to serving you better. We believe that our vision enables us to do just that by continuing to serve you faithfully; particularly in the areas of quality, timely delivery and value!

The Reshoring Movement

MADE IN THE USA

The Reshoring Movement

PSi specializes in high-speed micro miniature, miniature and medium sized metal stampings utilizing complex progressive dies.

Precision Stampings, Inc. has been experiencing rapid growth in 2018! With rising global consumer demand and the reshoring movement bringing jobs back to the US, manufacturing is expected to continue to ride this growth wave.

You've probably heard about the surging reshoring trend in American manufacturing; after decades of outsourcing production and contract manufacturing, many companies are now considering the financial benefits of moving their operations back to the United States.

Today, offshoring actually results in a higher total cost than domestic production — despite the often-higher labor costs at home. Advanced automation techniques will allow the precision metal stamping industry to easily take advantage of the various business opportunities that will soon be sprouting up as more OEMs reshore their operations.

The bleeding of US manufacturing jobs to offshore locations has stopped. According to Reshoring Initiative data, in the last decade the U.S. has gone from losing about 220,000 manufacturing jobs per year to breakeven in 2014 and 2015. Preliminary 2016 results show reshoring and FDI (Foreign Direct Investment) had a net gain of about 20,000 U.S. jobs.

Reshoring is, in many cases, a fast and efficient way to strengthen the U.S. economy and benefit manufacturing companies by reducing total costs, and supporting innovation. The savings on logistical costs alone as a result of producing in the market in which the products will be sold can often yield between a 15 to 20 percent improvement; easily overcoming the potential offshore wage gap.

But it's not just our domestic customers who benefit. PSi has been proudly serving industries all over the world from its manufacturing facility in the United States for over 50 years. PSi has withstood offshoring, recessions and downturns and through it all continues to be an industry leader even as others struggle.

PSi is embracing the reshoring trend! And with the opportunities you have continued to provide us, we are excited to grow with you!

- Psi is further expanding our engineering capabilities. More to come.
- Psi is increasing our manufacturing capacity and capability by creating a new assembly area that will include at least 4 additional presses and associated support equipment.
- Psi is adding additional office space for Estimating and Sales to support our overall expansion and serve you better.
